## DYNAMIC FLOW

### Basic Flowability

Used for measuring the effects of:

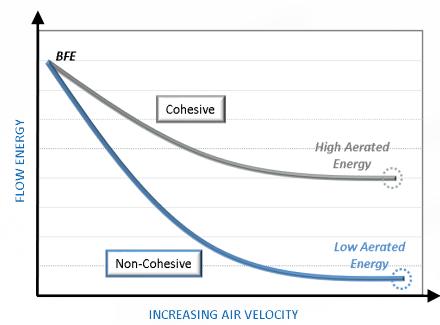

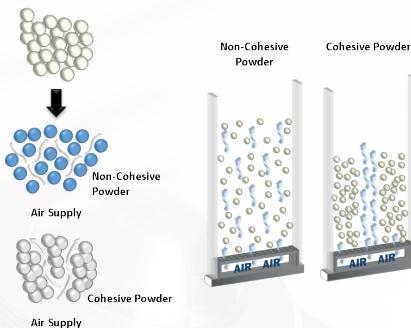

- Flow additives
- Wet granulation end point
- Moisture content
- Attrition / Segregation
- Physical properties (particle size, shape, surface texture, ...)
- Electrostatic charging

### Aeration

Used for measuring:

- Cohesion
- Low stress, gravitationally induced flow
- Dosing / Mass uniformity
- Fluidisation behaviour
- Blending / Mixing
- Segregation potential

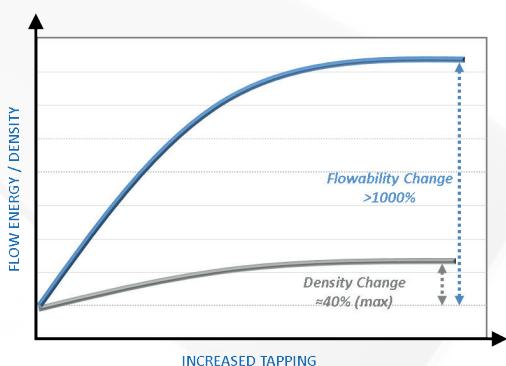

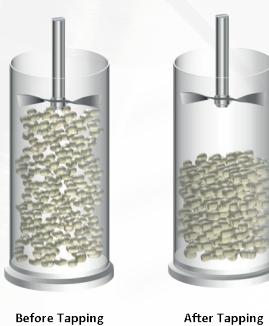

### Consolidation

- Direct Pressure
- Tapped

Understanding the effects of:

- Transport
- Storage
- Processing
- Caking

## SHEAR PROPERTIES

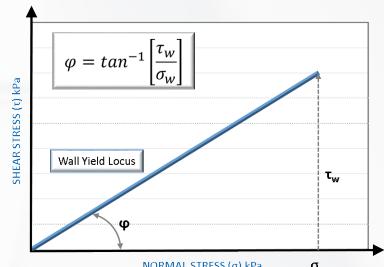

### Shear Cell

- Unconfined Yield Strength (UYS)
- Flow Function
- Cohesion
- 1ml Shear Cell
- Hopper design

### Wall Friction

- Measure friction between powder and surface material - Hopper, IBC, Punch
- Wall friction angle, for hopper design

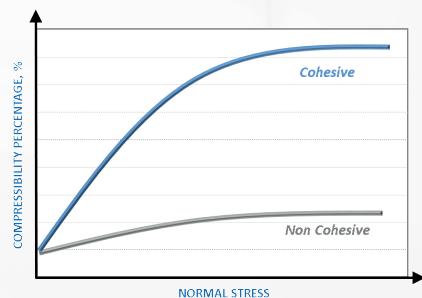

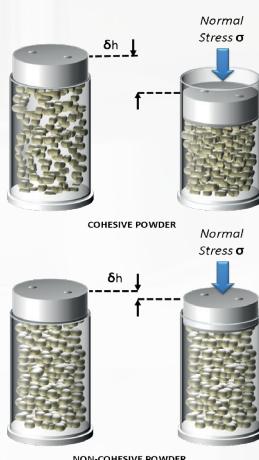

## BULK PROPERTIES

### Compressibility

Changes in density due to:

- Transportation
- Storage
  - Hoppers
  - Kegs
- Processing
  - Direct compression
  - Roller compaction
  - Screw feeding

### Permeability

Powder behaviour during:

- Aerosolisation / DPI
- Hopper flow
- Compression
- Pneumatic transfer
